**i2**

New add-on

i2 Insights

i2group.com/solutions

Supercharge your data processing with our automation add-on for Analyst's Notebook.

Reduce the time spent on manipulating and interrogating data with i2 Insights. With standardization and normalization of data, you not only reduce processing errors, but also find answers faster with the automation of insights, dashboards and mapping. An easy add-on to your Analyst's Notebook.

Highlights

Assisted Importer
Simply drag and drop data for automatic standardization and normalization.

Intel Views
Create easy to interpret graphs and displays of the data for quick insights.

Mapping
All location data presented on a map for analysis and interrogation.

Faster processing
Automatic import and processing without the need to create importing specifications manually.

Instant insights
i2 Insights provides answers to the most common investigative questions with a single click.
Such as:

- Who's been where?

- Who called who and with what SIM or phone?

- When and where they made the call?

- And much more...

Intuitive interface
Dashboards and interactive views display the data intelligently. Users can select any information of interest and understand its relation to the other data within their investigation.

Stay within the i2 product suite
Full integration with Analyst's Notebook as an add-on to utilize the full suite of analytics and charting.

i2 Insights

Processing data prior to analysis can account for 70% of investigative time.
i2 Insights automates this process, giving you the time back.
